

RAFTOP CPAP CARE Pro - Client Portal v1.0

Buyer-facing start portal for the controlled operational launch of RAFTOP CPAP CARE Pro. This portal summarizes the platform purpose, access flow, onboarding process, data intake, support model and resale preparation for doctors and clinics.

First step: Review this portal before the kickoff meeting. The goal is to align users, roles, data boundaries, first sample data and the first operational review.

1. What RAFTOP CPAP CARE Pro Provides

RAFTOP CPAP CARE Pro is a CPAP operations and follow-up visibility layer for Raftopoulos. It supports structured monitoring, no-data awareness, compliance risk visibility, ATLAS action organization, operational follow-up and management reporting.

The platform is intended to support operational control and reporting. It is not a diagnostic medical device. It is not a diagnostic medical device and does not replace physician judgment.

Operations CPAP follow-up ATLAS actions Reporting Resale preparation

Platform Access

Access is provided through the agreed production environment. User credentials are provided separately through a controlled process after named users and roles are confirmed.

- Buyer Admin
- CPAP Operations User
- Management Viewer
- Technical/Data Contact

Tenant Activation

The Raftopoulos environment is activated with a defined commercial path, user roles, support level, data boundary and first operational review date.

- Tenant status confirmed
- Roles confirmed
- Access route tested
- Support owner confirmed

Data Intake

The first data sample should use structured CSV format with controlled identifiers. Demo, anonymized or pseudonymized data is preferred for the initial review.

- patient_reference_code
- device_reference_code
- date
- usage_hours
- no_data_status
- leak_metric
- ahi_metric

Onboarding

Onboarding starts with a 60-minute kickoff and continues with first-user activation, first data sample review, ATLAS workflow review and first management summary.

- Kickoff meeting
- User activation
- Data sample review
- First operational review

Support Model

Support covers agreed access, workflow, data intake and operational usage questions. New modules, integrations, custom dashboards or expanded rollout items are handled through a separate change request process.

- Access support
- Workflow support
- Data intake clarification
- Change request handling

Doctor / Clinic Resale

After the internal Raftopoulos workflow is stable, the platform can support structured resale packages for doctors and clinics through reporting, dashboard access and managed CPAP visibility services.

- Basic CPAP Report
- Doctor Dashboard
- Clinic Plan
- Tenant provisioning process

2. Operational Start Sequence

Step	Action	Expected Output
1	Confirm receipt of the client portal package	Delivery acknowledged
2	Confirm buyer sponsor, operations owner and technical/data contact	Named owner list

3	Confirm first users and roles	User setup list
4	Confirm credential delivery method	Controlled access process
5	Prepare first sample data	CSV/data preview ready
6	Run 60-minute kickoff	Scope, users, data and next review aligned
7	Book first operational review	Review scheduled 3 to 7 days after kickoff

3. First 7 Days Plan

Day	Focus
Day 1	Kickoff, owners, access process and data boundary confirmation
Day 2	User role confirmation and first login test
Day 3	First CSV/data sample review
Day 4	No-data and compliance risk review
Day 5	ATLAS action workflow review
Day 6	Management reporting and summary review
Day 7	Blocker list, feedback and next operational decision

4. Data Intake Template

The recommended initial CSV structure is:

Field	Description
patient_reference_code	Pseudonymized patient reference
device_reference_code	Pseudonymized device reference

date	Therapy data date in YYYY-MM-DD format
usage_hours	CPAP usage hours
no_data_status	yes/no indicator for missing data
leak_metric	Leak value if available
ahi_metric	AHI value if available
follow_up_status	none, open, in_progress, completed or blocked
assigned_owner	Responsible person/team
notes	Short operational note

5. Support and Change Request Boundary

Standard support covers agreed access, route availability, onboarding usage, data intake clarification, ATLAS workflow guidance, reporting usage guidance and incident triage.

New features, new dashboards, new integrations, mobile application work, large custom reports, expanded doctor/clinic rollout and advanced automation require separate written scope, commercial approval and timeline.

6. Resale Preparation

Raftopoulos can use the platform to create structured CPAP visibility services for doctors and clinics. The recommended resale approach starts after the internal operational workflow has been validated.

Package	Indicative Positioning
Basic CPAP Report	Periodic patient visibility and risk summary
Doctor Dashboard	Ongoing visibility for assigned CPAP patients
Clinic Plan	Multi-user clinic overview and management reporting

7. Handover Checklist

Item	Status
Client portal received	To confirm
Buyer sponsor confirmed	To confirm
Operations owner confirmed	To confirm
Technical/data contact confirmed	To confirm
First users confirmed	To confirm
Credential delivery process confirmed	To confirm
First data sample planned	To confirm
Kickoff scheduled	To confirm
First operational review scheduled	To confirm

Next step: Schedule the 60-minute kickoff to confirm users, roles, credential delivery method, data boundary, first data sample and first operational review date.

RAFTOP CPAP CARE Pro - Client Portal v1.0. This portal is for controlled onboarding, operational use and commercial rollout preparation.
