

RAFTOP CPAP CARE Pro - Client Portal v1.0

Self-contained client handover portal for Raftopoulos. This file includes the start guide, onboarding, access instructions, data intake template, support/SLA boundaries, and resale launch material in one HTML file.

Open this file first.

This portal is self-contained. It does not depend on external Markdown links, so it can be opened directly by double-clicking **index.html** after extracting the ZIP.

Security boundary: this portal does not include credentials, source code, GitHub access, database credentials, Render secrets, GitHub secrets, .env files, or internal scripts. Credentials must be delivered separately through a controlled channel.

1. Start

Read the Start Here section.

2. Access

Confirm users and credential channel.

3. Data

Use the embedded CSV template.

4. Onboarding

Book the 60-minute kickoff.

5. Support

Respect SLA/change request boundaries.

6. Resale

Use resale model only with boundaries.

01 - Start Here

RAFTOP CPAP CARE Pro - Start Here

Purpose:

This is the first document for Raftopoulos after purchase or pilot acceptance.

What Raftopoulos receives:

RAFTOP CPAP CARE Pro is a CPAP Operations Control Layer for monitoring CPAP patients, identifying no-data cases, reviewing compliance risk, organizing ATLAS actions, supporting follow-ups, and creating management visibility.

What it is not:

It is not a diagnostic medical device.

It does not replace physician judgment.

Production frontend:

<https://raftop-cpap-frontend.onrender.com>

Backend health:

<https://raftop-cpap-backend.onrender.com/api/health>

First operational goal:

Use the platform to create visibility and action discipline around CPAP patients.

First workflow:

1. Login.
2. Review dashboard.
3. Review no-data cases.
4. Review compliance risk cases.
5. Review leak or therapy issue signals where data exists.
6. Create or review ATLAS actions.
7. Assign owners.
8. Review open actions.
9. Prepare management summary.

Important rule:

Do not share passwords, tokens, secrets, database URLs, or patient identifiers through unsecured channels.

02 - Platform Access Guide

RAFTOP CPAP CARE Pro - Platform Access Guide

Purpose:

Explain how the buyer accesses the platform safely.

Access URL:

<https://raftop-cpap-frontend.onrender.com/login>

Recommended first users:

1. Buyer Admin.
2. CPAP Operations User.
3. Management Viewer.
4. Technical/Data Contact.

Credential rule:

Credentials must be delivered separately through a controlled channel.

Do not send:

- passwords in group chat
- admin passwords by public email
- database credentials
- tokens
- Render settings
- GitHub secrets

Access control rule:

Give each user the minimum access required for their role.

If a user leaves or changes role:

Disable or update access immediately.

03 - First 7 Days Onboarding Plan

RAFTOP CPAP CARE Pro - First 7 Days Onboarding Plan

Day 1 - Kickoff and access:

- confirm buyer owner
- confirm operations owner
- confirm technical/data contact
- confirm access users

Day 2 - User roles:

- assign admin user
- assign operations user
- assign management viewer
- assign technical/data contact

Day 3 - Data sample:

- confirm data level
- review first sample
- check field names
- confirm data safety

Day 4 - First CPAP signal review:

- review no-data examples
- review compliance risk examples
- review leak/therapy signals where data exists

Day 5 - ATLAS workflow:

- create/review ATLAS actions
- assign owners
- set statuses

Day 6 - Management reporting:

- review Quality and Profit view
- define first management summary

Day 7 - Feedback and blockers:

- record blockers

- confirm next review
- decide next scope step

04 - Daily CPAP Operations Workflow

RAFTOP CPAP CARE Pro - Daily CPAP Operations Workflow

Purpose:

Define daily operational use.

Daily workflow:

1. Login.
2. Review patient overview.
3. Check no-data cases.
4. Check compliance risk cases.
5. Check leak or therapy issue signals where available.
6. Review ATLAS queue.
7. Assign actions.
8. Update statuses.
9. Escalate blocked cases.
10. Prepare daily or weekly summary.

Action ownership:

Every important signal should have an owner or a documented reason why no action is needed.

Management value:

The goal is not only to see data. The goal is to turn signals into actions.

05 - ATLAS Actions Guide

RAFTOP CPAP CARE Pro - ATLAS Actions Guide

Purpose:

Explain ATLAS action handling.

ATLAS action types:

- compliance risk
- no-data case
- leak or therapy issue
- follow-up required
- technical/data issue
- management review item

Action fields:

- patient reference
- signal type
- priority
- owner
- status
- due date
- notes

Recommended statuses:

- open
- in progress
- waiting
- resolved
- escalated

Rule:

An ATLAS action without owner and status is not operational control.

06 - Compliance / No-Data / Leak Workflow

RAFTOP CPAP CARE Pro - Compliance, No-Data and Leak Workflow

Purpose:

Define the first clinical-operational signals to review.

No-data workflow:

1. Identify patient/device without data.
2. Check whether data absence is expected.
3. Assign follow-up owner.
4. Record action status.
5. Escalate unresolved cases.

Compliance risk workflow:

1. Identify low or declining usage.
2. Assign follow-up action.
3. Record patient contact or action outcome.
4. Recheck at next review.

Leak or therapy signal workflow:

1. Identify high leak or therapy issue signal where data exists.
2. Assign technical or clinical review action.
3. Record outcome.

Boundary:

The platform supports operations and follow-up prioritization. It does not replace medical judgment.

07 - User Roles and Permissions

RAFTOP CPAP CARE Pro - User Roles and Permissions

Recommended roles:

Buyer Admin:

- manages buyer-side access
- sees operational overview

CPAP Operations User:

- reviews patient signals
- works ATLAS actions
- updates follow-up status

Management Viewer:

- sees executive summaries
- reviews reporting outputs

Technical/Data Contact:

- supports data sample
- checks import/data issues

Access principle:

Minimum necessary access.

Do not give admin access to every user.

08 - Data Intake Requirements

RAFTOP CPAP CARE Pro - Data Intake Requirements

Purpose:

This document defines the required structure for the first CPAP data sample provided by Raftopoulos.

Preferred data levels:

1. demo data
2. anonymized data
3. pseudonymized data
4. real patient data only with legal or DPA framework

Preferred file type:

CSV UTF-8.

Accepted source formats:

- CSV export
- Excel export converted to CSV
- structured table exported to CSV

Required fields:

- patient_reference_code
- device_reference_code
- date
- usage_hours
- no_data_status
- leak_metric
- ahi_metric
- follow_up_status
- assigned_owner
- notes

Rules:

- do not send uncontrolled real patient identifiers
- do not send passwords or credentials in the data file
- do not mix demo and real data without clear label
- do not import before preview and approval
- confirm data sensitivity before transfer

First data objective:

Enable safe review of no-data cases, compliance risk, leak or therapy signals, follow-up status, and ATLAS actions.

09 - CSV Template

patient_reference_code,device_reference_code,date,usage_hours,no_data_status,leak_metric,ahi_metric, follow_up_status,assigned_owner,notes

10 - Sample Data Rows

patient_reference_code,device_reference_code,date,usage_hours,no_data_status,leak_metric,ahi_metric, follow_up_status,assigned_owner,notes

P-0001,D-1001,2026-06-01,6.4,no,12.5,3.1,none,operations_team,stable_usage

P-0002,D-1002,2026-06-01,2.1,no,24.8,7.2,open,operations_team,compliance_risk

P-0003,D-1003,2026-06-01,0,yes,,,open,data_team,no_data_case

P-0004,D-1004,2026-06-01,5.2,no,38.0,5.4,in_progress,technical_team,high_leak_review

P-0005,D-1005,2026-06-01,7.0,no,10.2,2.9,completed,operations_team, follow_up_completed

11 - Buyer Onboarding Runbook

RAFTOP CPAP CARE Pro - Buyer Onboarding Runbook

Purpose:

This runbook explains how Raftopoulos starts using RAFTOP CPAP CARE Pro after purchase, pilot acceptance, or annual license activation.

Onboarding goal:

Move from platform access to controlled operational use.

Required before onboarding starts:

- written acceptance
- billing details
- payment or payment structure
- commercial path selected
- tenant activation
- buyer sponsor named
- operations owner named
- technical/data contact named
- data boundary confirmed

Onboarding stages:

1. kickoff
2. user activation
3. data sample review
4. first login and route test
5. first CPAP signal review
6. ATLAS daily board routine
7. first management review
8. blocker review
9. next scope decision

Boundary:

Onboarding is not unlimited implementation. It follows agreed scope and commercial path.

12 - Support Scope Overview

RAFTOP CPAP CARE Pro - Support Scope Overview

Purpose:

Define what support includes and what requires separate scope.

Included support within agreed commercial path:

- access issue review
- login guidance
- route availability review
- agreed workflow questions
- data intake clarification
- CSV template clarification
- ATLAS workflow guidance
- reporting usage guidance
- incident triage
- bug investigation within agreed scope

Not included as standard support:

- new features
- new dashboards
- live AirView integration
- mobile app
- doctor portal production expansion
- ERP/CRM integration
- unlimited custom development
- unplanned data migration
- 24/7 support unless contracted

Support principle:

Support keeps the agreed platform operating. It does not create unlimited new product scope.

Boundary:

New functionality requires change request approval.

13 - Out of Scope Items

RAFTOP CPAP CARE Pro - Out of Scope Items

The following are not included unless separately agreed:

- live AirView integration
- automatic AirView API connection
- full mobile app
- patient app
- full doctor portal production rollout
- ERP integration
- CRM integration
- EOPYY integration
- automated billing integration
- unlimited custom dashboards
- unlimited data migration
- 24/7 emergency support
- clinical diagnosis or medical decision automation
- unrestricted source code handover
- unrestricted resale rights

Reason:

These items require separate technical, legal, commercial, or implementation scope.

Rule:

Out of scope does not mean impossible. It means separate approval and pricing.

14 - Resale Launch Overview

RAFTOP CPAP CARE Pro - Resale Launch Overview

Purpose:

This document explains how Raftopoulos can resell RAFTOP CPAP CARE Pro value to doctors and clinics.

Resale positioning:

Raftopoulos can offer CPAP monitoring visibility, structured follow-up support, compliance risk visibility, no-data awareness, ATLAS action discipline, and management/reporting value to doctors and clinics.

Important:

Doctor and clinic resale should start only after the internal Raftopoulos workflow is stable.

Primary resale value:

- recurring revenue
- stronger doctor relationship
- CPAP patient retention
- differentiation beyond device sales
- structured reporting service
- controlled doctor/clinic access

What doctors buy:

Doctors and clinics do not buy source code. They buy access, visibility, reports, and structured CPAP follow-up information under an agreed package.

Boundary:

RAFTOP supports operations, reporting, and follow-up prioritization. It is not a diagnostic medical device and does not replace physician judgment.

15 - Doctor / Clinic Packages

RAFTOP CPAP CARE Pro - Doctor and Clinic Packages

Purpose:

Define resale packages for doctors and clinics.

Package 1 - Basic CPAP Report

Price:

490 EUR per doctor per year plus VAT.

Includes:

- periodic CPAP patient summary
- risk list
- no-data visibility summary
- basic compliance risk visibility
- report export or summary

Best for:

Doctors who want periodic CPAP patient visibility without full dashboard use.

Package 2 - Doctor Dashboard

Price:

990 EUR per doctor per year plus VAT.

Includes:

- doctor-specific dashboard
- assigned patient visibility
- no-data cases
- compliance risk cases
- ATLAS action visibility
- reports

Best for:

Doctors who want ongoing visibility for their CPAP patients.

Package 3 - Clinic Plan

Price:

1900 to 2900 EUR per clinic per year plus VAT.

Includes:

- clinic-level overview

- multiple users
- patient group reporting
- management summary
- review cadence

Best for:

Clinics with multiple doctors or larger CPAP patient groups.

Pricing rule:

Do not discount before scope is clear. If price is reduced, scope must also be reduced.

16 - Resale Boundaries and Contract Rules

RAFTOP CPAP CARE Pro - Resale Boundaries and Contract Rules

Purpose:

Prevent uncontrolled resale, unlimited access, or unclear commercial rights.

Required before resale:

- resale rights clarified
- pricing approved
- support responsibilities defined
- tenant provisioning rules accepted
- data controller/processor roles clarified
- white-label rights clarified if applicable
- renewal handling defined
- access blocking for non-payment defined

Not allowed without written agreement:

- unrestricted resale rights
- source code handover
- unlimited doctor tenants
- unlimited custom development
- uncontrolled patient data transfer
- use as diagnostic medical device
- 24/7 support commitment

Commercial rule:

Every resale customer must have a package, price, billing status, support level, and renewal date.

Legal/data rule:

Real patient data requires appropriate legal/data protection framework.

Final boundary:

Resale must scale with governance. Scaling without boundaries destroys product value.

17 - Delivery Manifest

RAFTOP CPAP CARE Pro - Delivery Manifest

Delivery package:

RAFTOP_CLIENT_START_PACK_v1.0.zip

Included folders:

00_START_HERE.md
01_EXECUTIVE_SUMMARY.md
02_CLIENT_START_PACK/
03_DELIVERY_MANIFEST.md
04_SECURITY_BOUNDARY.md
05_VERSION_LOCK.md

Client start pack contains:

- client start documents
- production access and tenant activation pack
- data intake and CSV template pack
- buyer onboarding runbook pack
- support/SLA/change request pack
- resale launch kit

Excluded materials:

- tools/
- reports/
- enterprise-backend/
- enterprise-frontend/
- node_modules/
- .git/
- .env files
- secrets
- raw logs
- backup folders

Delivery rule:

This ZIP is safe for client-facing handover. It is not a source-code handover.

18 - Security Boundary

RAFTOP CPAP CARE Pro - Security Boundary

This package must not contain credentials, tokens, secrets, database URLs, source code, internal scripts, or developer-only logs.

Credential delivery:

Credentials must be delivered separately through a controlled channel.

Do not send:

- passwords in group chats
- admin credentials in public email threads
- database URLs
- Render secrets
- GitHub secrets
- raw tokens
- patient identifiers through uncontrolled channels

Production access:

Production access is controlled platform access, not source code handover.

Data rule:

Use demo, anonymized, or pseudonymized data unless real patient data has legal/data protection approval.

Boundary:

RAFTOP supports operations, reporting, and follow-up prioritization. It is not a diagnostic medical device.

19 - Version Lock

RAFTOP CPAP CARE Pro - Version Lock

Delivery version:

v1.0

Package:

RAFTOP_CLIENT_START_PACK_v1.0.zip

Readiness chain:

PHASE59_FINAL_CLIENT_START_PACK_READINESS_READY

PHASE60_FINAL_PRODUCTION_ACCESS_TENANT_ACTIVATION_READINESS_READY

PHASE61_FINAL_DATA_INTAKE_CSV_TEMPLATE_READINESS_READY

PHASE62_FINAL_BUYER_ONBOARDING_RUNBOOK_READINESS_READY

PHASE63_FINAL_SUPPORT_SLA_CHANGE_REQUEST_READINESS_READY

PHASE64_FINAL_RESALE_LAUNCH_KIT_READINESS_READY

Version rule:

Anything added after this client delivery package is a new version or change request, not part of the v1.0 client start pack.

RAFTOP CPAP CARE Pro - Client Portal v1.0. This package supports operations, reporting, and follow-up prioritization. It is not a diagnostic medical device.
